

GLOWING MOUTH GUARD

ABSTRACT

5 A glowing mouth guard has a transparent main body, and a
transparent glow element for insertion in the main body; the glow
element has an outer part formed with several separate holding rooms,
which contain respective easily-breakable sealed tubes as well as
respective first chemicals therein; the sealed tubes contain respective
10 second chemicals therein; one of both of the chemicals in each holding
room of the glow element is a catalytic agent, and the other a luminous
chemical, which can produce fluorescent glow through a chemical
reaction with the help of the catalytic agent when it is mixed with the
agent, such that the holding rooms of the glow element have respective
15 ones of several different-colored fluorescent glows shining.
